Orlando - Open to front and back

General Installation Guidelines for "decoflame® made to measure fireplaces", open to two sides:

It is essential to maintain a 5mm gap all the way around the fireplace (Cut-out = Fireplace Dimensions + 10mm) This gap must not be sealed.

As the edges of the cut-out remain visible it is important that they are done to the highest possible finish. All four corners of the cut out must have exactly a 90 degree angle.

Plasterboard walls - Stud-walls

All surfaces inside the wall cut-out are to be covered with fibre plaster sheets or other non-flammable materials.

Stone/Brick walls

The cut-out is made according to the attached drawing.

Important

Make sure to create a closed cavity for the section below the base plate of the fire and above the roof of the fireplace.

Installation process

Exploded view showing the installation process.

1. The casing with glassholders, frame back and glass high back is centered in the wall cut out.
 - the casing sceured with fasteners and use suited wall plugs.
2. Connect the burner to power socket and placed in the safety chamber.
3. Frame front secerured carefully, then finally placed the low glass.

IMPORTANT INFORMATION

Particulars of the wall in which the fireplace shall be installed

DO NOT! install the fireplace in a wall construction which is open above and below the fireplace. The warm air will cause turbulences inside this hollow construction which will have a negative impact on the flames.

DO! install the fireplace in an open-wall construction, which is closed above and below the fireplace. Make sure to create a closed cavity for the section below the base plate of the fire.

DO! install the fireplace in a massive wall (made of bricks, stone or gas beton) using the wall cut-out dimensions mentioned on the previous page.
